## What Clients are saying about Wireless Bridging

“While we were planning for our move to our current location just off of the 401, we found that Bell could not provide high speed services to that location. The wireless solution provided by MicroAge and Chatham Internet Access has fulfilled all promises. It is a much faster connection at a price substantially less than a comparable frame relay or fiber connection.”

- Greg Sparling, VP of Operations - RM Auctions

Greenhill Produce uses MicroAge’s wireless Ethernet Bridging to be able to view the greenhouse controls from the house. There is also a long distance link to a second greenhouse across the river, bringing both controls systems together. “I am happy with the ease of the software setup and the reliability of the connection.”

- Justin Geertsma, Greenhill Produce

AGRIS uses a high speed Ethernet Wireless Bridge to connect to Chatham Internet Access. The Wireless service offers synchronous performance, which means the same upload and download speeds. “The DSL service was just too slow for us. The uplink speed would not support the numerous remote users. There was not enough bandwidth. We would absolutely recommend this service to others.”

- Alex Elliott, AGRIS Co-Operative
